

Collectively we are stronger

Engineers generating collaborative solutions to strengthen community resilience post-disaster

10th Brunel International Lecture Series

Presented by Duncan Gibb BEng (Civil) FICE, FIPENZ
Executive General Manager, SCIRT

QUALIFIES FOR 1 PDH

Thursday September 25, 2014 at 5:30pm
Arup, 77 Water Street
New York, NY 10005, US

Increasing risk is a dominant theme of the 21st century. Engineers are well placed to act as leaders of change to meet this challenge. Innovative forms of collaborative thinking and action are required to mitigate, prepare for and respond to crisis.

Now in its 10th Series the ICE's new Brunel International Lecture describes an internationally award winning post-disaster collaborative recovery model. The Stronger Christchurch Infrastructure Rebuild Team – SCIRT - designed by engineers, and organisational specialists, to meet the massive horizontal infrastructure challenges created by the earthquakes that struck Christchurch, New Zealand in 2010 and 2011.
